

We claim:

1 1. A DNA vector construct comprising
2 an internal ribosomal entry site (IRES),
3 a selection marker, and,
4 a green fluorescent protein marker.

1 2. A cell stably transfected with the DNA vector construct of claim 1.

1 3. The cell of claim 2 wherein said cell is a stem cell.

1 4. A reagent for assessing biological processes in real time, comprising a sufficient quantity of
2 cells stably transfected with the DNA construct of claim 1 in a suitable carrier medium.
